# AMD, PHITS Analysis

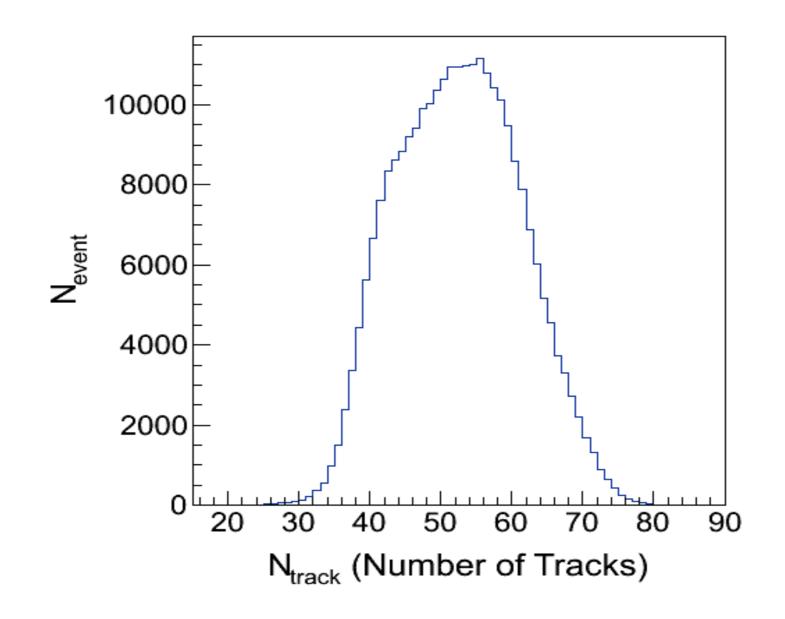

Park JaeBeom

### $^{132}Sn+^{124}Sn - AMD&PHITS$

	AMD	PHITS
Number of Events	N(event) = 2010	N(event) = 272018
Number of particles (per event)	<n> = 62.047</n>	<n>=52.040</n>
Number of Neutrons (per event)	< neutron> = 49.783 (80.23%)	< neutron>=33.138 (63.68%)
Number of Charged Particles (per event)	< charged>= 12.265 (19.77%)	< charged>=15.986 (30.72%)
Number of Protons (per event)	< proton> = 5.213 (8.40%)	<pre></pre>
Number of Gammas	no gammas	<gammas>=2.916 (5.60%)</gammas>

### Number of Track

 $N_{track}$  (<sup>132</sup>Sn + <sup>124</sup>Sn - PHITS)

### Number of Track (charged)

### Number of Track (charged)

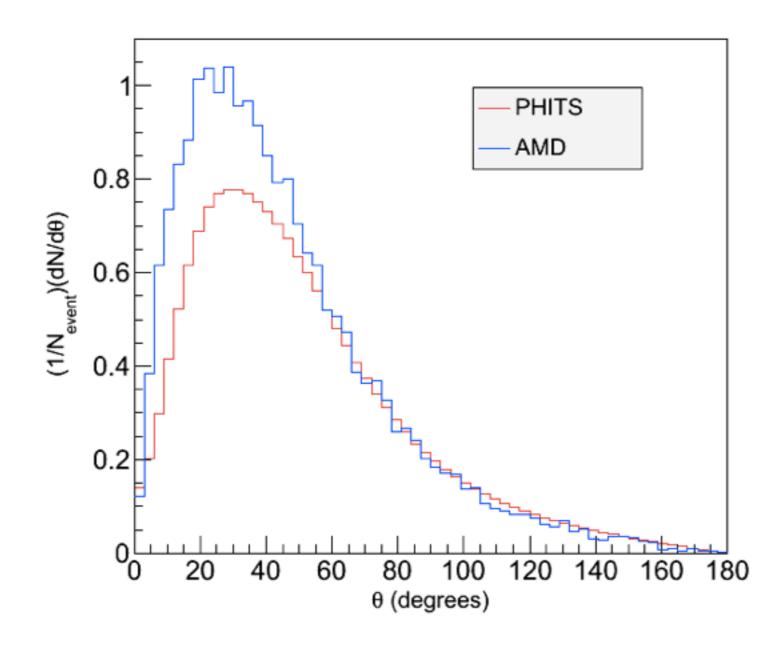

Back-up

### Theta

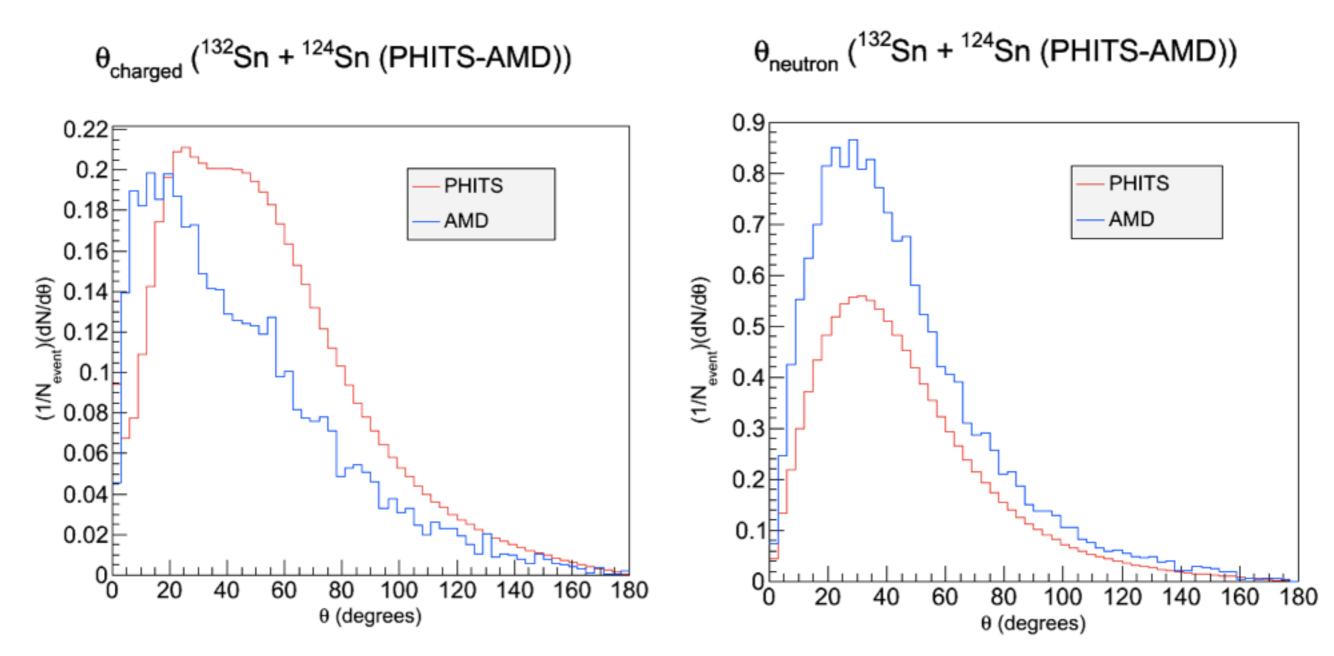

(number of bins: 60)

#### $\theta$ (<sup>132</sup>Sn + <sup>124</sup>Sn (PHITS-AMD))

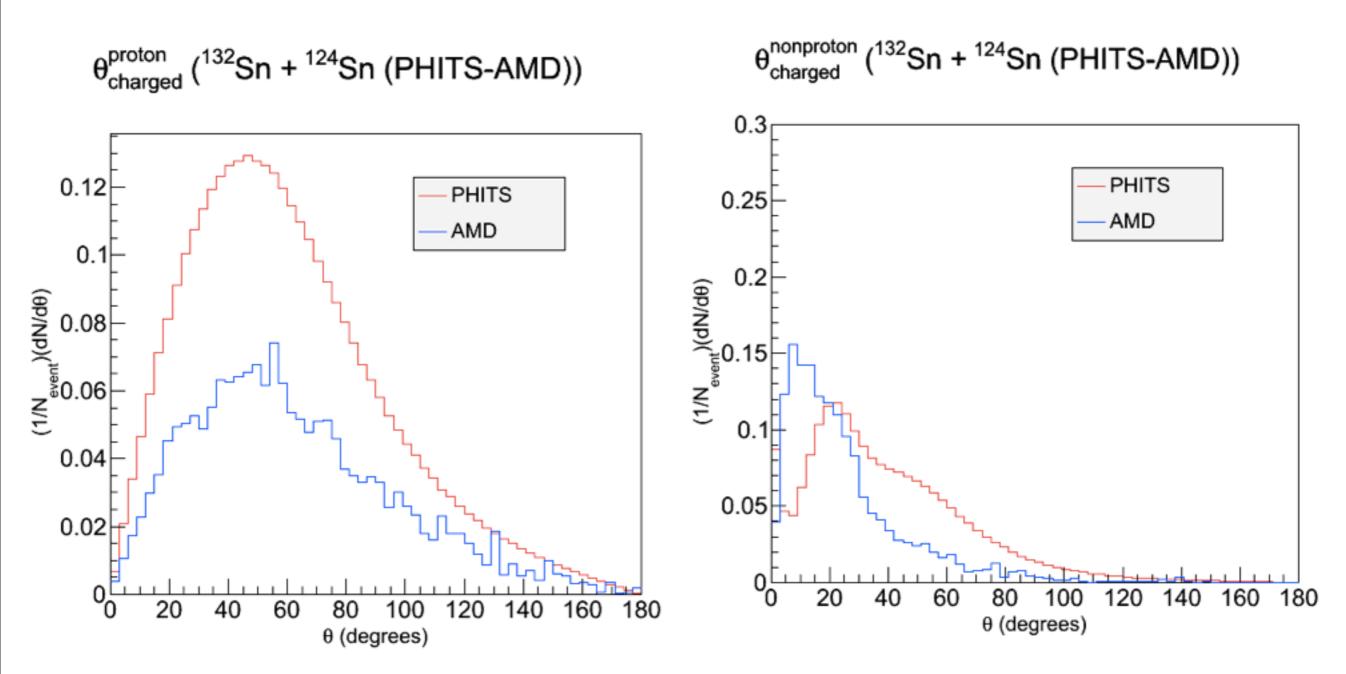

### Theta - Charged/Neutron

(number of bins: 60)

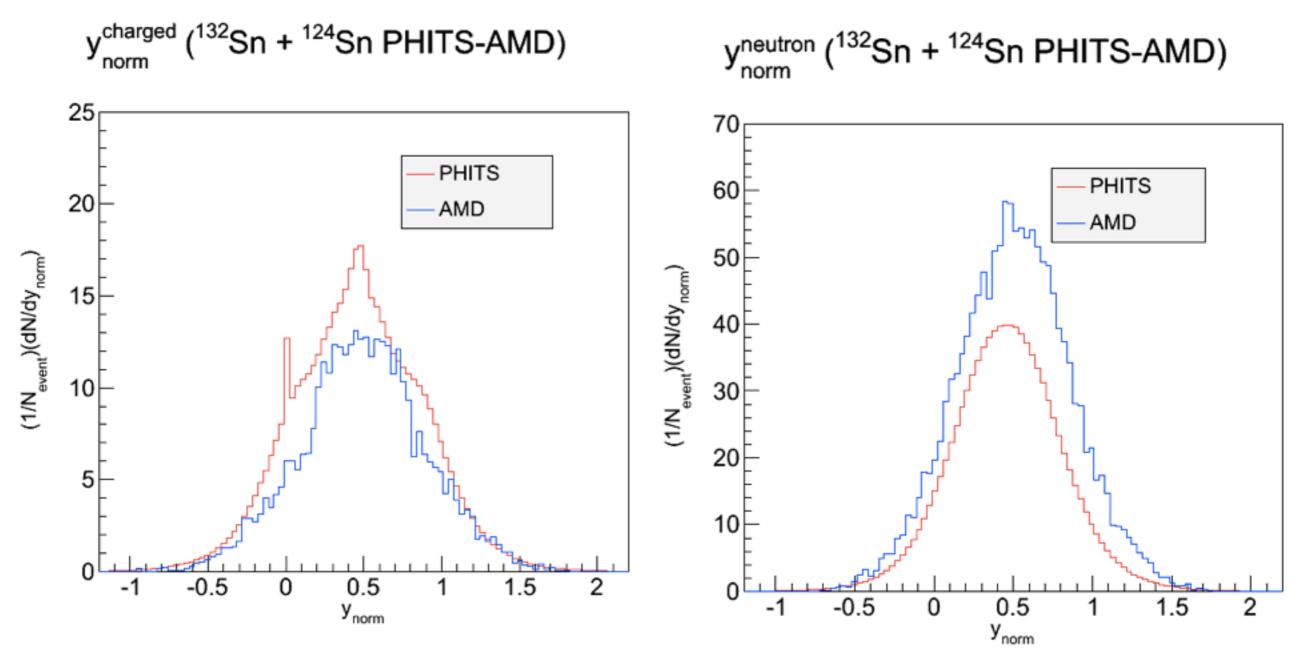

## Theta - Charged

# Rapidity - AMD

(number of bins: 100)

# Rapidity - Charged

(number of bins: 100)
