## 두 중성자가 들어왔을때 정확히 구분하는 효율

신호를 2개 이상 남긴 event만 모아서 계산

두 중성자의 에너지 : (50 MeV , 50MeV+energy difference)

Time gap (50 MeV, 50MeV +  $\Delta E$ )

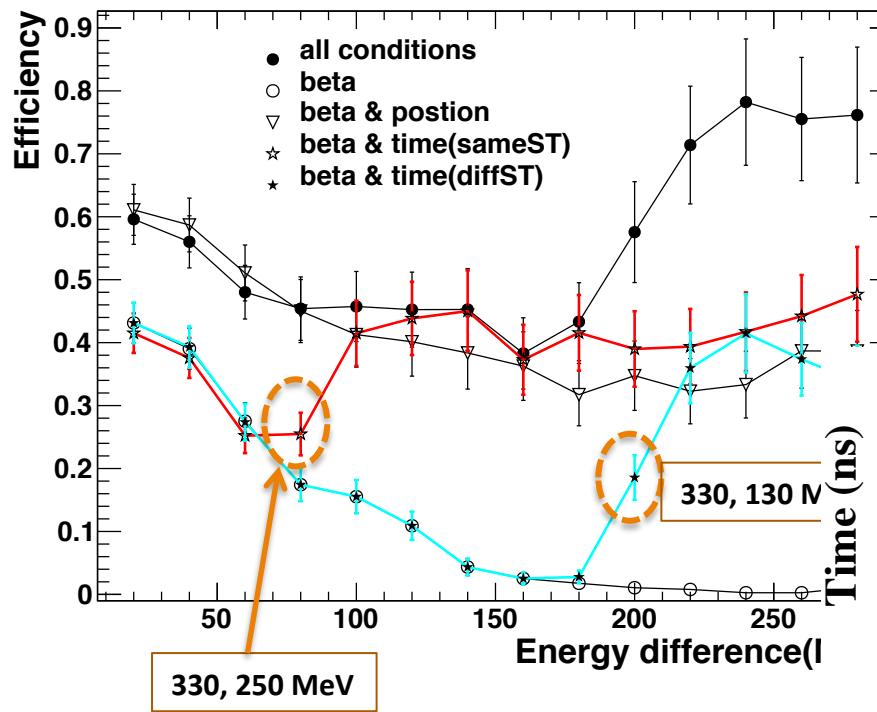

50 MeV, 70 MeV 경우

$leastT < t_{diff} < leastT + 15 \text{ ns}$

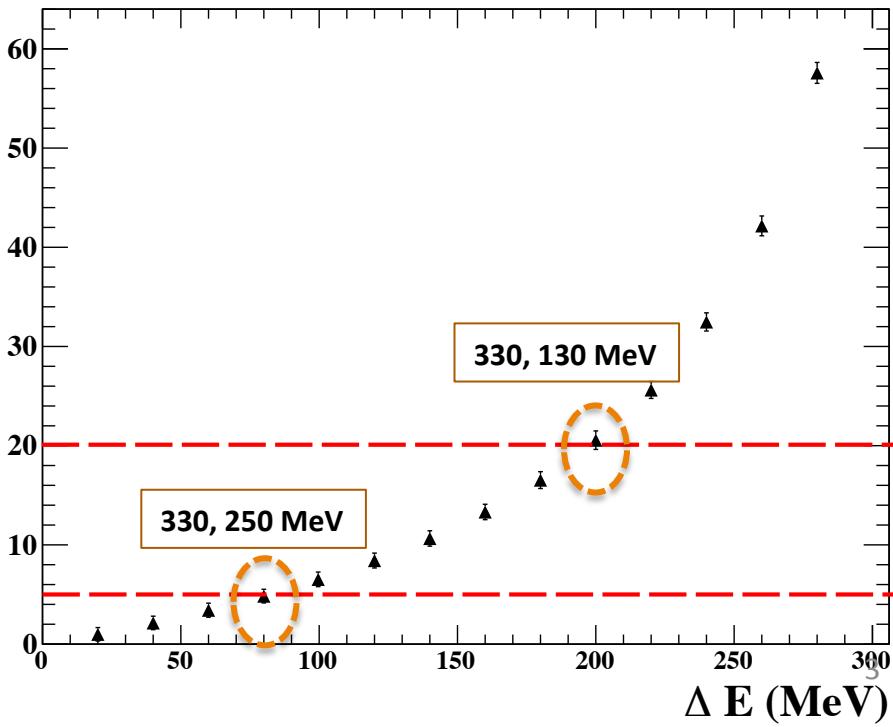

$\rightarrow \sim 22\%$

# 두 중성자가 들어왔을때 정확히 구분하는 효율

(330 MeV , 330MeV - Energy difference)

Time gap (330 MeV, 330 MeV -  $\Delta E$ )

# 1<sup>st</sup> station 에 도달하는데 걸리는 시간
