

Upsilon v2 status

KiSoo Lee

Condition

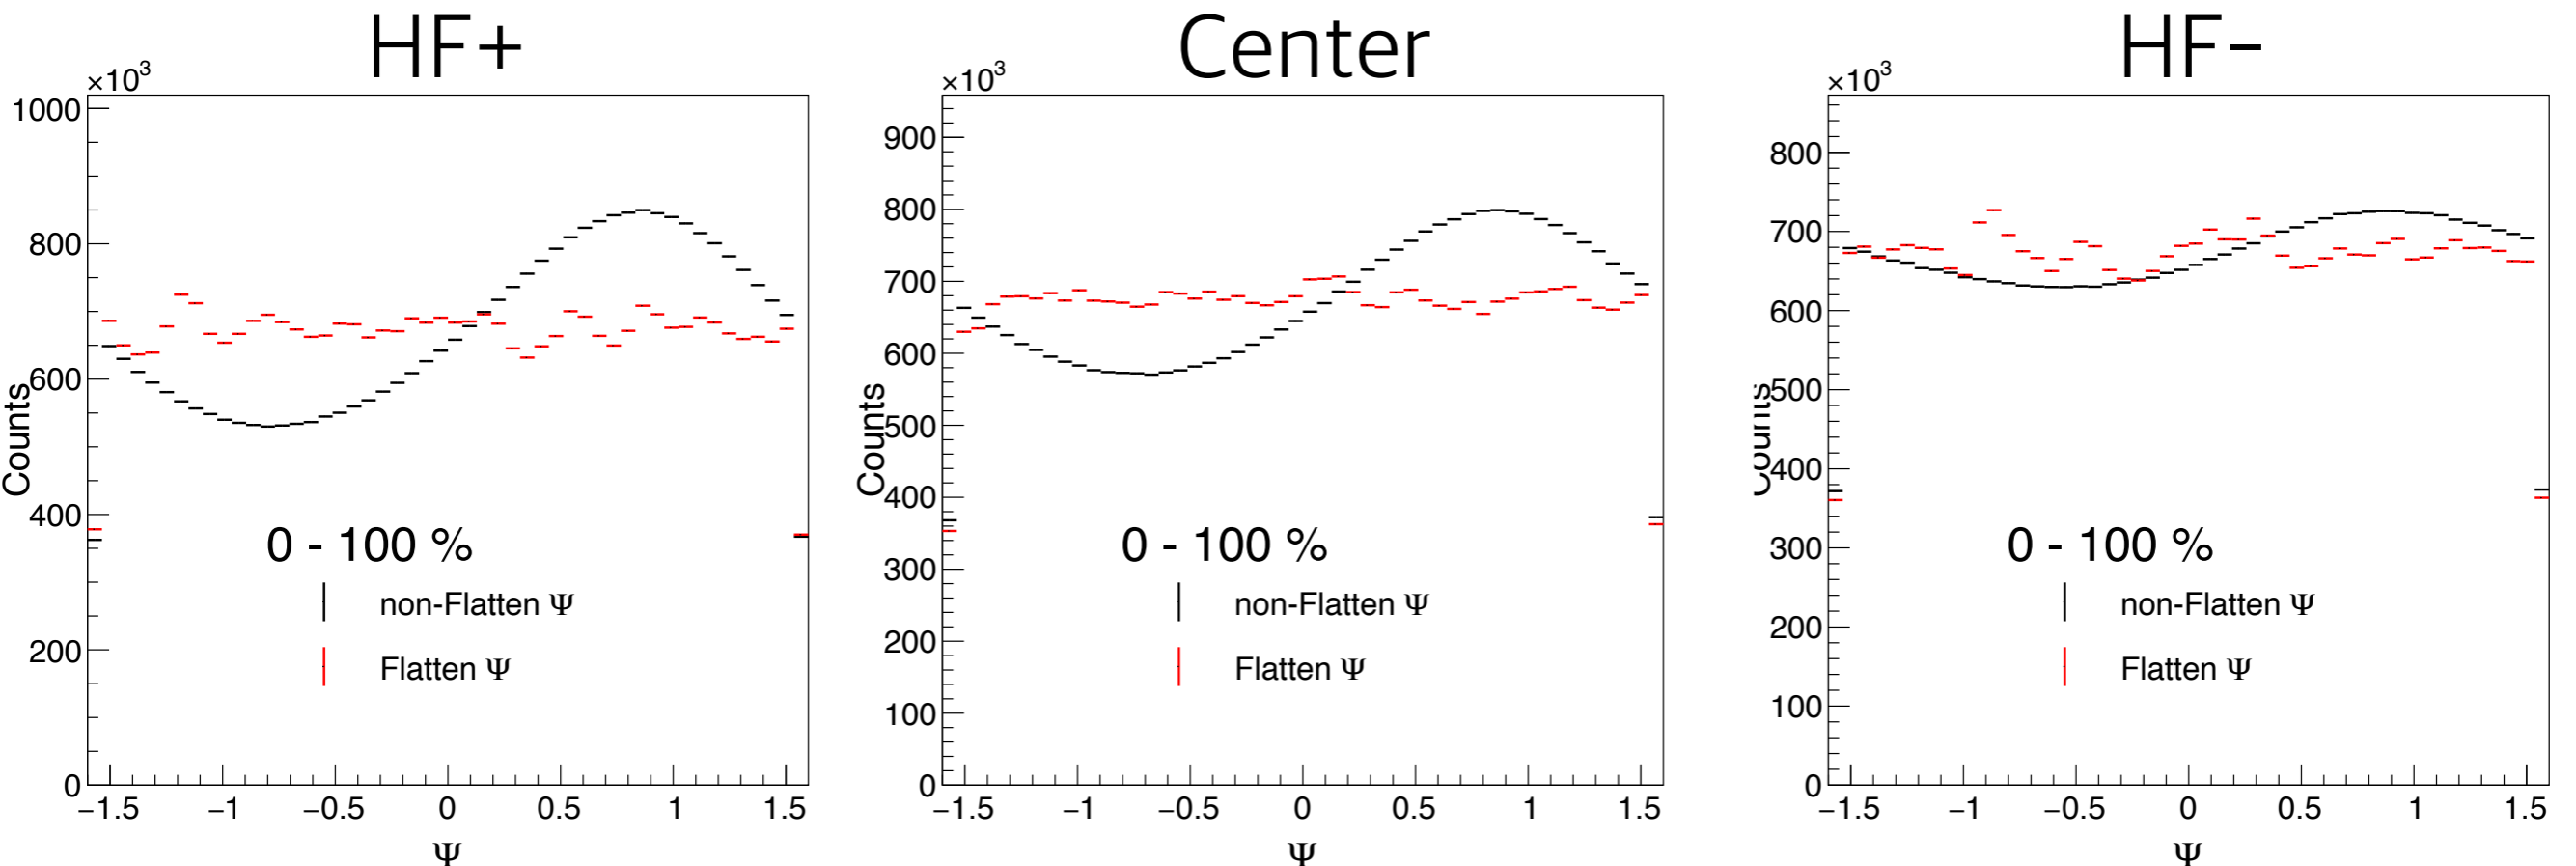

- Dataset:
 - HiOniaDoubleMu0
 - HiOniaDoubleMu0B
 - HiOniaDoubleMu0C
 - HiOniaDoubleMu0D
- Acceptance range: muon $p_T > 4$

• 1S binning
 $|y|: \{0, 1.2, 2.4\}$
Centrality: $\{20, 30, 50, 80, 120\}$
 $p_T: \{0, 3, 6, 10, 30\}$
 $d\phi: \{0, \pi/8, \pi/4, 3\pi/8, \pi/2\}$

• 2S binning
 $|y|: \{0, 1.2, 2.4\}$
Centrality: $\{20, 50, 120\}$
 $p_T: \{0, 6, 30\}$
 $d\phi: \{0, \pi/8, \pi/4, 3\pi/8, \pi/2\}$

EventPlane Flattening

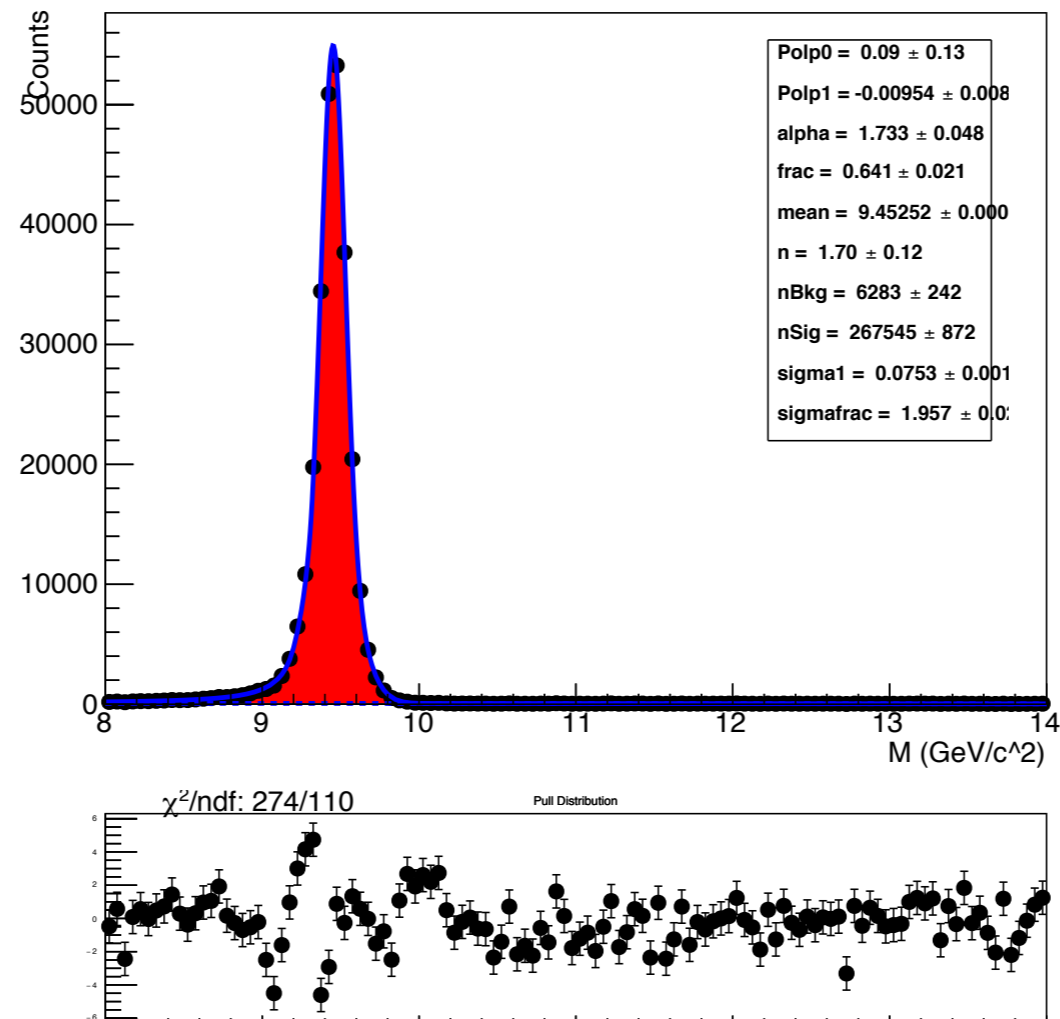

$$\Psi_2 = \Psi'_2 \left(1 + \sum_j^{j_{max}} \frac{1}{j} \left(-\langle \sin(2j\Psi'_2) \rangle \cos(2j\Psi'_2) + \langle \cos(2j\Psi'_2) \rangle \sin(2j\Psi'_2) \right) \right)$$

- Flattening is done with 9th order correction
- Amplitude between rpAng[6] and rpAng[7] and rpAng[8] are different

Signal function

twoCB_Pol1

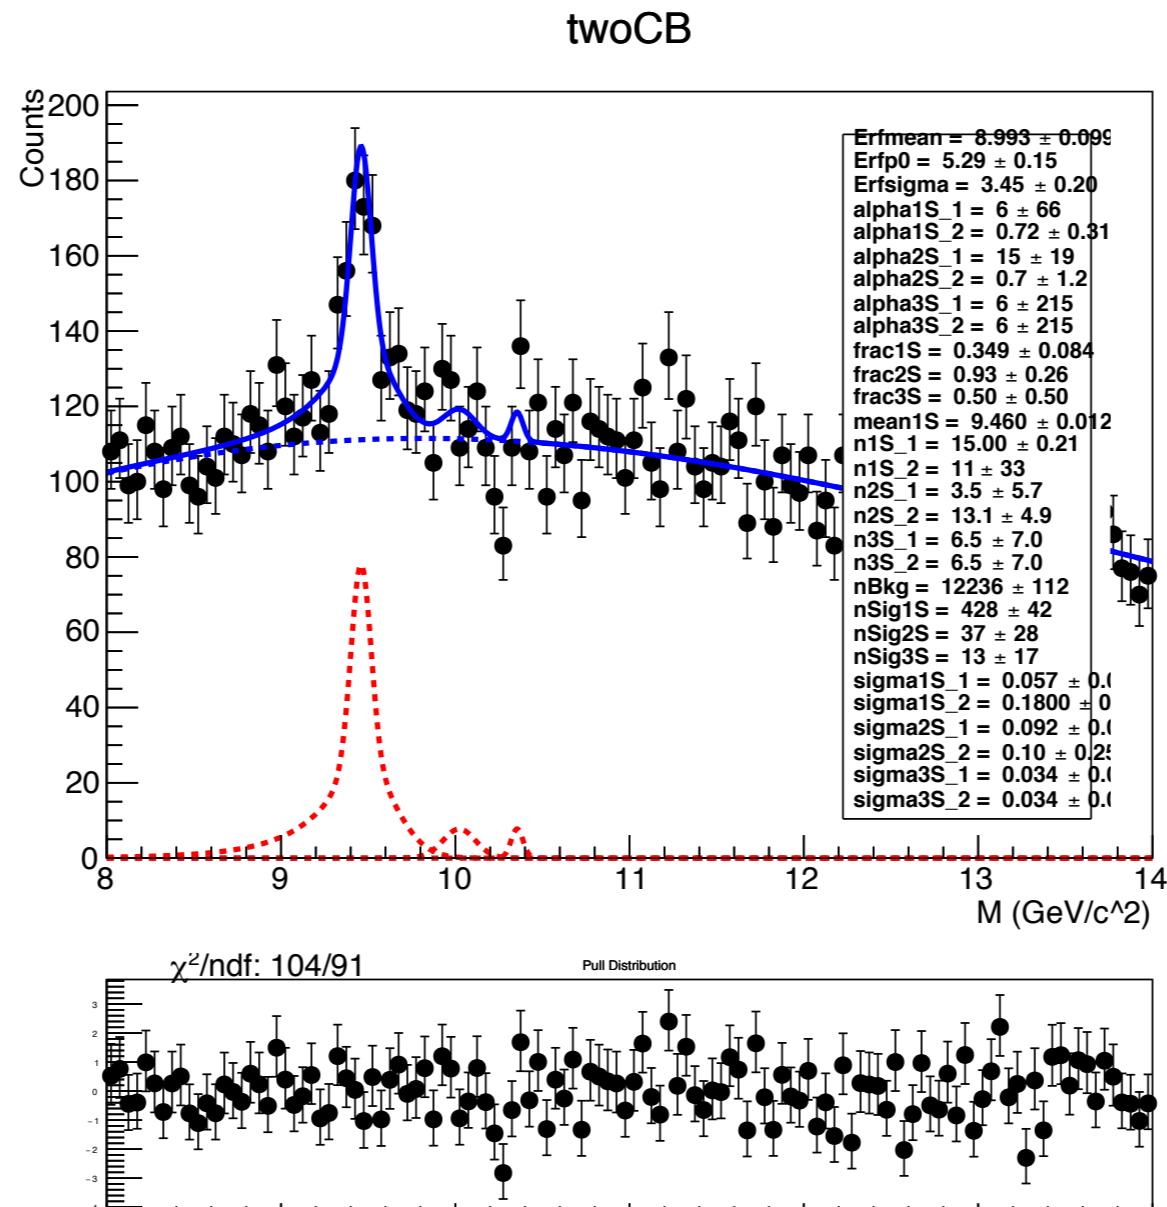

| normalized χ^2 | Gaus | twoGaus | CBGaus | CB | twoCB |
|---------------------|------|---------|--------|------|-------|
| 1S | 58.0 | 26.0 | 14.4 | 14.6 | 2.5 |
| 2S | 44.1 | 32.7 | 8.5 | 10.1 | 2.7 |
| 3S | 54.2 | 45.1 | 10.5 | 10.6 | 2.3 |

Background function

| Function | Cheb1 | Cheb2 | Exp | Pol1 | Erf |
|---------------------|-------|-------|------|------|------|
| normalized χ^2 | 2.32 | 2.08 | fail | 4.96 | 1.43 |

Mass Fit($0 \leq |y| < 1.2, 0 \leq d\phi < \pi/6$)

- Mass fitting looks reasonable but need to check other bins

$dN/d\phi$

- Error bar is large with 4 centrality bin and 4 $d\phi$ bin

V2

y

Centrality

p_T

- 2S is not reasonable
- 1S shows Centrality dependence
- p_T distribution is not reasonable

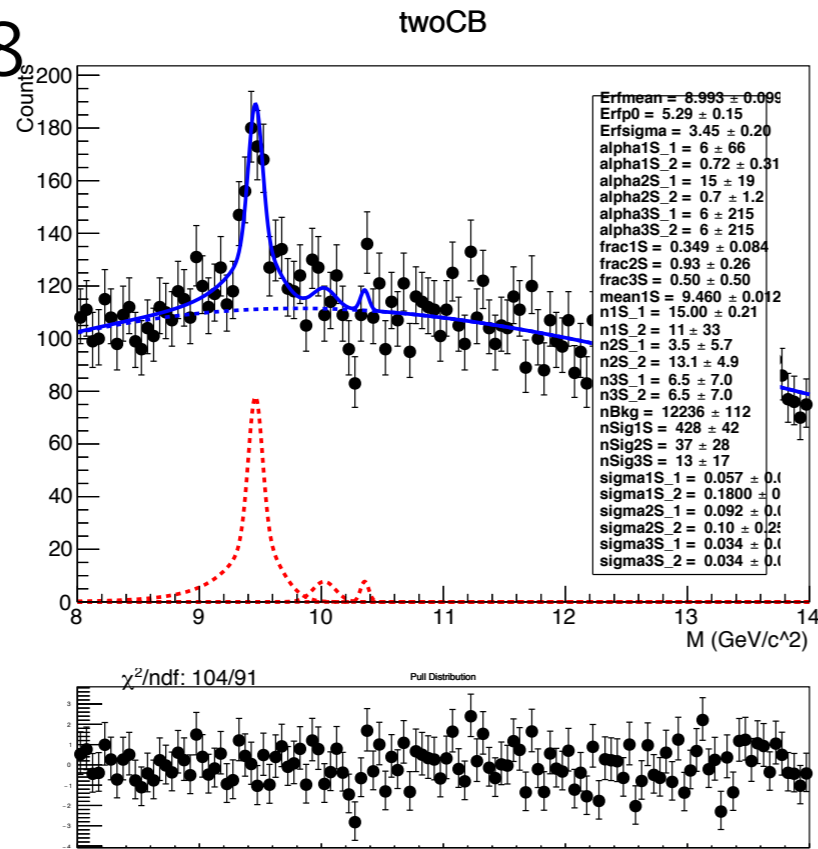

Summary

- 1. Rapidity
 - Need to refit mass distribution
 - Do we need rebinning?
- 2. Centrality
 - 1S v_2 distribution is reasonable but last $dN/d\phi$ bin fitting is not reasonable
- 3. p_T
 - no p_T dependence
- 4. Coarse binning is ongoing to get reasonable Upsilon 2S v_2
